## PRICES IN CANADA AND OTHER COUNTRIES DURING 1936\*

Wholesale prices in most countries were at higher levels at the end of the year than at the end of 1935, there being advances during the last half of the year following a period of relative stability or in some cases slight declines in the earlier months. The recovery in prices commenced in 1933 in nearly all countries except those whose currencies were still on the gold basis. In the latter the downward movement continued until 1935 when there was some advance which became more pronounced following devaluation in 1936. The upward movement in most cases was due in the main to higher prices of grains, non-ferrous metals and other primary products. The cost of living was irregularly higher in many of the principal countries during the year continuing the upward movement which commenced in 1933, the advances being due in large part to the higher cost of foods.

### The Movement of Retail Prices and Cost of Living in Canada during 1936

Table I brings down to the end of 1936 the index number of changes in the cost of living in Canada, based on prices in 1913 as 100, and shows the percentage changes in the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

The movement of this index was within narrow limits during 1936, the high point reached in December being only 3.2 per cent above the low reached in the spring and 1.5 per cent above December, 1935. The food group was again the chief factor in the move-

ment of the index though there were slight seasonal changes in the fuel and clothing groups and an advance in rent in the spring and again in the autumn. Since the recovery in prices began in the summer of 1933 the index number of the cost of living has risen 7.5 per cent, here, also, influenced mainly by the movement in foods and to a considerable extent by clothing and rent. In spite of this increase it was at the end of the year 19 per cent below the level of December, 1929, the figures being 129 and 160 respectively.

The movement in the food group was to a large extent seasonal, the index declining from 111 in December, 1935, to 106 in May and June, 1936, and then rising to 114 by the end of the year, an increase as compared with the end of 1935 of 2.7 per cent. Most of the items changed little, declines being somewhat more numerous than advances though the latter exerted greater influence on the index than the former. The most important increases were in the prices of bread, flour and cheese during the later months of the year, and in two commodities usually subject to wide seasonal variations, namely eggs and potatoes. Between March, 1933, the low point in many years for the group, and December, 1936, foods rose 25 per cent. On the latter date the index was, however, 29 per cent below the figure for December, 1929.

In the fuel and light group the movement during 1936 was slight, such as occurred being due almost entirely to the usual seasonal changes in the price of United States anthracite coal. This group has remained at approximately the same level since 1933, being about 10 per cent below that of 1929.

Rent for workingmen's houses advanced slightly during 1936, continuing the movement which commenced in the autumn of 1934, the low point for the group having been in the summer of that year. The advance from the low point down to the end of 1936 was 5.5 per cent.

Clothing declined slightly in the spring and advanced in the autumn as in recent years. The level at the end of the year was about two per cent higher than at the beginning. From the low point of 107, reached in the summer of 1933, the index for the group advanced to 117 at the end of 1936, or 9 per cent, but it was still about 25 per cent below pre-depression levels.

\*The Dominion Bureau of Statistics issues reports on prices with comprehensive figures, as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and other countries).

\* The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

Tables II and IV show the cost of a weekly family budget of foods, fuel and lighting, and rent in terms of the average prices for the Dominion and by groups for each province.

Retail prices for meats showed relatively little movement during the year, remaining at about the levels prevailing during the last few months of 1935. In beef, sirloin steak averaged 23.1 cents per pound for the year, the same as for 1935, as compared with the pre-depression level of 36.3 cents in 1929. Fresh leg roast of pork was at the low price for the year in December at 20.4 cents per pound as compared with the high of 22.4 cents in August. The yearly average price was 21.4 cents per pound in 1936 and 21.2 cents in 1935, as compared with 12.1 cents in March, 1933 (the low point) and a yearly average for 1929 of 30 cents per pound. Wholesale prices for beef and pork were lower during most of 1936 than in 1935, factors in this being the considerably greater movement of live stock off the farms in the former year than in 1935 and the substantial increase in the figures as to slaughterings of cattle and hogs, as well as improvement in export movement of live stock, beef and bacon. Lard was about 2 cents per pound lower at the end of the year than at the beginning, the price in December being 15.9 cents per pound as compared with a low price in recent years of 11.3 cents in July, 1932.

Egg prices were higher month by month during 1936 than in the previous year. The average price for the fresh grades was 33.8 cents per dozen as compared with 31.2 cents in 1935. Stocks in cold storage were about the same throughout the year as in 1935. The production of creamery butter during the year was the greatest on record, being about 4 per cent more than in 1935. The retail price showed the usual seasonal movement but was about the same at the end of the year as at the beginning and little changed month by month from 1935. The average for the year was 28.3 cents per pound as compared with 27.3 cents in 1935, 25.5 cents in 1933 and 47 cents in 1929.

The price of cheese has shown little recovery during the last five years, except for the closing months of 1936 when the price advanced about 2 cents per pound. The average price for the year was 21.1 cents per pound as compared with 20.4 cents in 1935 and 33.4 cents in 1929.

The price of flour, reflecting the continued improvement in wheat prices, was at the end of the year at the highest level reached since the end of 1930 but still much below 1929 levels. Some comparative figures are: 3.9 cents per pound in December, 1936, 2.6 cents at the beginning of 1933 (the low point) and 5.3 cents in December, 1929. Higher prices

for bread were reported from many cities during the year, the average price per pound being up from 6.2 cents in January to 6.6 cents in December.

The yield of potatoes in 1936 was estimated to be about the same as in 1935 and much lower than in 1934. An improved export demand developed from the United States, the 1936 crop there being considerably smaller than in 1935. Prices in Canada during 1936 were higher than for some years, comparative figures being \$1.50 per ninety pounds in December, 1936, \$1.21 in December, 1935, and 72 cents in December, 1934.

United States anthracite coal declined from an average price of \$14.90 per ton in January, 1936, to \$14.43 during the summer and then advanced in the autumn to \$14.78 in December.

#### Wholesale Prices in Canada, 1936

The accompanying tables, V, VI and VII, show the index numbers of wholesale prices in Canada calculated by the Dominion Bureau of Statistics, the commodities being arranged according to "chief component materials" in table V, "purpose" in table VI and "origin" in table VII.

This index number moved to substantially higher levels during the last half of 1936, following a moderate decline from the beginning of the year. In December the index number was 9½ per cent higher than at the end of 1935 and 25 per cent higher than at the lowest level of recent years reached in 1933, but still 17 per cent below the figure for December, 1929. The feature of the movement during the year was the further improvement in the relative position in the price levels of primary as compared with manufactured products, with the result that at the end of 1936 the index numbers for "raw and partly manufactured goods," and "fully and chiefly manufactured goods" were at approximately the same level for the first time since early in 1930, though still much below the levels of that time. The index number for the former group was 79.3 in December, 1936 and for the latter 77.3, an advance since the end of 1935 of 18 per cent and 6 per cent respectively.

The index for consumers' goods advanced from 74.4 in December, 1935, to 76.9 in December, 1936, mainly because of advances in foods, chiefly milled products, milk and its products, vegetables, and bakery products. Producers' goods increased 16 per cent during the same period, the index for the group being up from 69.4 to 80.4. The principal advances were in materials for building and construction, as well as in materials for the furs and leather goods industries, for the metal working industries, for the milling and other industries and for miscellaneous producers' materials.

TABLE II.—COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING  
The budget is intended to show the changes in the cost of items included not to show

† An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent.

† Kind most sold since October 1922.

In the grouping according to chief component materials the Vegetable Products group showed much the greatest advance of any of the eight principal groups, being up 26 per cent at the end of the year as compared with December, 1935, owing chiefly to higher prices for grains, milled products, vegetables, tobacco, rubber and vegetable oils. Important increases occurred also in the Wood and Wood Products group, mainly because of advances in the prices of lumber; the Non-Ferrous Metals group, because of higher prices for copper, lead, zinc and tin; the Iron and its Products group, because of advances in prices of pig iron, rolling mill

products and in scrap. The Animal and its Products group was only slightly higher, there being important declines in prices of live stock, meats and eggs, and increases in furs, hides, leather and milk and its products. The Textile Products group, the Non-Metallic Minerals group and the Chemical and Allied Products group were little changed.

Table III, on page 7, gives the wholesale prices of certain commodities on primary markets and is compiled from information in the monthly bulletins on "Prices and Price Indexes," issued by the Dominion Bureau of Statistics.

AND RENT IN TERMS OF THE AVERAGE RETAIL PRICES IN SIXTY-NINE CITIES IN CANADA  
the minimum cost or the quantities of different foods required for an average family.

## Prices in Great Britain and Other Countries

The accompanying tables numbered VIII to XXIII give index numbers of retail prices of foods and cost of living and of wholesale prices in several of the principal commercial and industrial countries for 1936 and for preceding dates to show the movements of prices in comparison with those in Canada. The information in the following tables is obtained for the most part from publications of the governmental or other authority compiling the index number, but in some cases from the Monthly Bulletin of Statistics of the League of Nations, Geneva, which bulletin publishes figures for many countries. The quarterly supplement to Prices and Price Indexes issued by the Dominion Bureau of Statistics, Ottawa, also contains index numbers for many countries.

### Great Britain

**COST OF LIVING.**—The Ministry of Labour's index number (Table X), based on the pre-war standard of living of a workingman's family (food expenditure weighted 60 per cent) declined during the early months of the year. Beginning in July, an upward movement appeared and the index for December 1 was 4·8 per cent higher than the June level. In this same period, food advanced 8 per cent. There was a slight increase in clothing prices early in the year and the higher level was maintained. The fuel and light, sundries and rent groups, however, showed little or no change during the year.

**WHOLESALE PRICES.**—Following a rise in prices in the latter part of the year 1935 and in January 1936, prices on the whole showed little variation during the first five months of the year, according to the Board of Trade index number (Table XI). In July, a general advance began which extended to all of the eleven component groups. Comparing prices in December, 1936, with the same month in 1935, the general index number had advanced 10·2 per cent. All groups were included in the advance, cereals rising 28·6 per cent and wool 25·6 per cent.

### France

**COST OF LIVING.**—The decline in the index number of the cost of living, Paris (Table XII), which began in 1931, continued until it

reached its lowest point in this period in the third quarter of 1935. Since that time, each quarterly figure has shown an advance, the fourth quarter of 1936 being 12·9 per cent higher than for the same quarter in 1935.

**WHOLESALE PRICES.**—The upward movement which began in August, 1935, continued throughout 1936, with the exception of slight recessions in two months (Table XIII). After the gold basis was discontinued in September, 1936, prices in terms of national currency increased considerably, but prices index numbers based on gold values (not included in this table) decreased in October, advancing again in November and December.

### Germany

**COST OF LIVING.**—There was no marked trend in the cost of living during 1936 (Table XIV). The index number for November, 1936, was 1·1 per cent higher than for the same month in 1935. Fats and meats were upward. Clothing had increased 4·2 per cent in this period, while the other groups showed only slight variations.

**WHOLESALE PRICES.**—Wholesale prices also showed little variation during the year 1936, advancing one per cent between November, 1935, and November, 1936 (Table XV). In this period, agricultural products declined slightly, while the other three main groups recorded small advances.

### United States

**COST OF LIVING.**—Between October, 1935, and September, 1936, the Bureau of Labour Statistics index number (Table XXII) advanced 2·1 per cent. Except for a small decline in the fuel and light group, all groups were included in the upward movement during the year.

**WHOLESALE PRICES.**—There was no marked trend in the movement of wholesale prices between October, 1935, and October, 1936 (Table XXIII). Between the lowest point for this period reached in May and the highest in August and September, there was a difference of 3·8 per cent.

TABLE VIII.—INDEX NUMBERS OF RETAIL PRICES AND COST OF LIVING IN CANADA AND CERTAIN OTHER COUNTRIES (Base figure 100 except where noted)

(a) Average for year. (b) First of month. (c) Middle of month until August, 1933; thereafter this index number is calculated fortnightly and the figure given in this table is for the date nearest to the middle of the month. (d) Cost of weekly family food budget. (e) Figure for following month. (f) Figure for previous month. (g) Quarter beginning in specified month. (h) Highest category workmen's household. (i) December.
